

## **NO DANGER FOR ZUARI BRIDGE**

Panaji, August 27, 2018  
Bhadra 5, 1940

It has been widely reported that there is danger for the Zuari Bridge as a result of a gap seen at the abutment location on the Cortalim side end. In this regards the Public Work Department, Altinho, Panaji has hereby informed the general public that the said gap is the expansion joint gap which is in the range of 40-50 mm and is kept open to facilitate expansion/ contraction for the bridge span. The surrounding concrete layer over a small portion is disturbed by the impact of vehicular movement but there is no damage to the expansion joint. There should be no apprehension on the safety and stability of the bridge.
