MY WASTE
IN THESE BINS**

NO TIME TO WASTE
BE A WASTE WARRIOR!

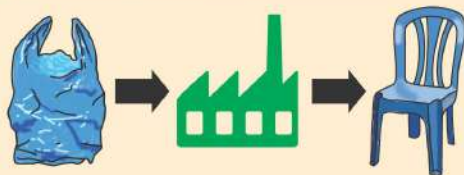

DO YOU KNOW?

We generate more than 400 tonnes of waste every day in Goa. This is equivalent to 400 classrooms full of garbage per day.

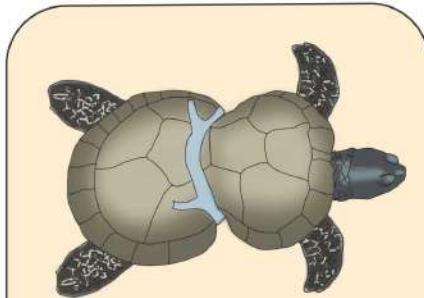

The burning of plastic generates dangerous gaseous substances such as 'dioxins' & 'furans', they can cause diseases like cancer. So, burning of waste is bad for our health and is illegal too.

85% of the waste we produce could be recycled. This means that it will not end up in a landfill or dumpsite.

When we carelessly generate mixed waste, a toxic liquid called 'leachate' leaks out of it. This liquid is dangerous to humans & the environment too. Leachate is polluting our drinking water.

Thousands of animals & marine life die every year due to us, carelessly throwing waste onto the land and into water bodies.

You don't need to just rely on the Panchayat, you can also give your waste directly to a recycler.

NO TIME TO WASTE
BE A WASTE WARRIOR!

WASTE CATEGORIES

Wet

Waste that can decompose.
Leftover food
Spoilt food
Fruit & Vegetable peels
Milk products
Seafood waste
Fish bones
Meat bones
Egg-shells,
Hair
Coconut shell & husk
Dead animals
Soiled paper
Garden waste.

(Composting unit)

Recyclable Dry Waste Waste which does not decompose but can be recycled.

Paper & Cardboard

News Paper, Paper, Paper-cups & plates, Cardboard box, TetraPak

Plastic

Plastic bottles, cups, bags, containers & Hard plastic

Glass & Metal

Glass, glass bottle, Aluminium foil, All kind of metal

Non Recyclable Waste Waste which does not decompose & can't be recycled.

Thermocol, Chips packet, Rubber items, Cloth, Rexine, Leather, Vinyl

DO YOU KNOW?

We generate more than 400 tonnes of waste every day in Goa. This is equivalent to 400 classrooms full of garbage per day.

When we carelessly generate mixed waste, a toxic liquid called 'leachate' leaks out of it. This liquid is dangerous to humans & the environment too. Leachate is polluting our drinking water.

The burning of plastic generates dangerous gaseous substances such as 'dioxins' & 'furans', they can cause diseases like cancer. So, burning of waste is bad for our health and is illegal too.

Thousands of animals & marine life die every year due to us, carelessly throwing waste onto the land and into water bodies.

85% of the waste we produce could be recycled. This means that it will not end up in a landfill or dumpsite.

You don't need to just rely on the Panchayat, you can also give your waste directly to a recycler.

Do you know that energy can & should be produced from waste? But only when you segregate your waste properly!

WHAT CAN I DO?

TIPS TO BE A GREAT WASTE WARRIOR

If you follow these tips, you can be a true waste warrior & reduce the amount of trash that ends up in landfills & dumpsites.

B) Identify the nearest recycler (Kabadiwala) or authorised person from your panchayat & hand over your waste to them. You could even earn some pocket money by selling your recyclable items to a recycler.

D) Carry your own reusable bags, water bottle & tiffin when you go out.

F) If you notice others littering, politely teach them not to litter.

A) REFUSE – do not accept plastic bottles, straws, unnecessary packaging.

REDUCE - your own waste
REUSE - whatever you can
RECYCLE - the rest, is always best!

C) Shop from your local grocery shop & remember to bring your own shopping bag instead of asking for a plastic bag.

E) Do not litter. Never throw ANY wrapper or garbage into the open. It is illegal, a danger to life & looks terrible too. Put your waste away until you find a bin or get back home.

G) Find out where your parents dispose your family's waste & teach them some best practices for responsible waste disposal.
